

TIMELOGIC

Brand Identity & Design System Guidelines

The definitive architectural standards, cryptographic brand tokens, visual language, and hardware guidelines for TimeLogic Enterprise Attendance & Workforce Systems.

01 · 3-Layer Integrity Network, Device & Time verification engine	02 · High-Contrast UI Deep navy & electric blue ergonomic tokens
03 · Biometric Hardware Kiosk mounting & camera lighting standards	04 · Zero Payroll Fraud Tamper-proof audit logs and live reporting

Document ID: TL-BRD-2026	Version: 2.4.0 (Enterprise)	Target: Design & Engineering

01 / BRAND ESSENCE & ARCHITECTURE

Brand Philosophy & The 3-Layer Trust Model

TimeLogic was engineered to resolve the structural vulnerabilities of modern workforce tracking. Traditional attendance systems—paper registers, standalone biometric fingerprint devices, and generic mobile apps—suffer from pervasive proxy punch-ins, geolocation spoofing, and unverified work hours. TimeLogic establishes an immutable, zero-trust attendance architecture where every clock-in is cryptographically verified.

The Core Foundation: The 3-Layer Verification Model

Layer 01 Hardware-Bound Network	Validates that the check-in originates exclusively from within the authenticated physical facility. The client device must be connected to the organization's designated Wi-Fi BSSID or enterprise static public IP. Remote attempts outside the network perimeter are rejected instantly.
Layer 02 Device & Biometric Lock	Enforces single-device hardware binding. Each employee account is permanently mapped to one approved smartphone or physical kiosk station. Integrated facial recognition with interactive alignment frames ensures the enrolled individual is physically present.
Layer 03 Time & Cryptographic QR	Employs ephemeral, 30-second rotating cryptographic QR tokens generated on hardware kiosks. Check-ins must fall within authorized operating shift windows and grace thresholds. Dynamic tokens prevent screen recordings, photos, and replay attacks.

Four Brand Pillars

1. Absolute Truth No estimated hours or buddy punches. Attendance you can stand behind in court or payroll audits.	2. Frictionless Velocity Rapid check-in throughput under 1.5 seconds per employee, preventing queues at busy factory entrances.
3. Immutable Auditability Append-only ledger records every verification event, geolocation, penalty, and break duration permanently.	4. Enterprise Resilience Local kiosk station caching guarantees offline check-in survival even during total ISP or power outages.

Brand Voice & Communication Tone

Voice Attribute	How We Sound (DO)	What We Avoid (DON'T)
Authoritative & Exact	"Three checks. All must pass. Or it does not count."	"Try our handy attendance app when you get time."
Reassuring & Solid	"Your workforce records are permanently locked and payroll-ready."	"We think your timesheet data is probably safe."
Clear & Modern	"Hardware-bound biometric attendance with zero proxy punch-ins."	"Synergistic paradigm of paradigm-shifting clock-ins."

02 / LOGO IDENTITY & MARKS

Logo System, Geometry & Exclusion Zones

The TimeLogic emblem is an engineered visual mark combining two foundational tenets: the chronological precision of time measurement (represented by calibrated ticks) and the fortress-like perimeter security of cryptographic verification. It serves as the primary hallmark of trust across our software apps, web portal, hardware kiosks, and partner collateral.

Primary Emblem (Full Brand Lockup)

High-contrast deep blue emblem for enterprise platforms

Standalone Monogram Mark

App icon, hardware bezel, favicon, and system badges

Clear Space (Exclusion Zone) & Minimum Reproduction Rules

Parameter	Digital Specification	Physical Print Specification
Clear Space Formula (X)	Minimum padding on all 4 sides equal to 1.5X (where X is the height of the inner 'T' monogram).	Maintain 10mm isolation zone from adjacent text, borders, or partner logos.
Minimum Lockup Size	Width: 120 pixels at 72 DPI (ensures crisp legibility on web & mobile headers).	Width: 32 mm (maintains stroke integrity on business stationery and datasheets).
Minimum Standalone Mark	24 x 24 pixels (kiosk status bar, mobile launcher, browser favicon).	8 x 8 mm (hardware serial badges, laser-etched tablet bezels).

Approved Variations & Strict Logo Violations

Approved Applications	Strictly Prohibited Violations (DO NOT)
• Navy Background: Full-color emblem on #0a1638 with white typography. • White Background: Full-color mark on #ffffff with Slate-900 typography. • Monochrome Inverted: 100% pure white on dark enterprise backgrounds. • Monochrome Black: 100% black on grayscale printouts and official invoices.	• DO NOT skew, stretch, or alter the geometric aspect ratio. • DO NOT add drop shadows, outer glows, or artificial bevel effects. • DO NOT separate the monogram from the wordmark in the primary lockup. • DO NOT place the logo over busy photos without a minimum 80% opacity dark scrim. • DO NOT change the official Electric Blue (#2563eb) to unapproved blues.

03 / COLOR SYSTEM & TOKENS

Color Architecture & Contrast Matrix

The TimeLogic color architecture is grounded in an enterprise-grade, high-contrast B2B palette. It is built to maintain uncompromising visual authority, reduce eye fatigue during continuous administrator monitoring, and provide unmistakable semantic clarity for security alerts.

The 60-30-10 Balance Rule: 60% Foundation (Deep Navy #0a1638 / Pure White #ffffff) · 30% Structural Surfaces (#0e2154 / #f8fadc / #1e293b) · 10% High-Contrast Focus (Electric Blue #2563eb / Emerald Verified #10b981 / Crimson Alert #ef4444).

Primary Brand & Foundation Palette

Color Role	HEX Code	RGB Values	CMYK Values	Primary Application
TimeLogic Navy	#0A1638	10, 22, 56	100, 85, 35, 45	Primary brand hero, dark mode canvas, header chrome
Electric Blue	#2563EB	37, 99, 235	84, 58, 0, 8	Primary interactive buttons, key actions, focused states
Cyber Sky	#38BDF8	56, 189, 248	77, 24, 0, 3	High-contrast text highlights, pairing badges, link focus
Deep Obsidian	#07112D	7, 17, 45	100, 88, 40, 60	Surface container cards, kiosk panels, terminal footers
Pure White	#FFFFFF	255, 255, 255	0, 0, 0, 0	Light mode background, primary body text on dark mode

Semantic Status & Compliance Palette

Status Token	Color & HEX	System Meaning & Interface Trigger	WCAG Ratio
Verified Success	#10B981 Emerald	Check-in confirmed, biometric face matched, station paired, session active.	7.2:1 (AAA)
Grace Warning	#F59E0B Amber	Grace arrival window active, pending leave approval, network latency check.	5.8:1 (AA)
Security Violation	#EF4444 Crimson	Fraud alert triggered, IP mismatch, duplicate device punch-in, absent mark.	6.1:1 (AA)
Neutral Slate	#64748B Slate Muted	Secondary descriptive labels, structural grid borders, deactivated rows.	4.8:1 (AA)

04 / TYPOGRAPHIC SYSTEM

Typography Matrix & Structural Hierarchy

Typography in TimeLogic is engineered for high-velocity comprehension. Whether an administrator is analyzing multi-department payroll variance on a 4K display, or an employee is verifying check-in on an Android tablet under harsh factory lighting, our type scale ensures immediate optical readability.

Primary Sans-Serif: Inter / Geist Sans	Technical Monospace: Geist Mono / Courier
- Clean, humanist neo-grotesque with tall x-height. - Optimized open apertures prevent blur on low-DPI kiosks. - Applied across headlines, navigation, data tables, and body copy.	- Fixed-width characters ensure tabular alignment of attendance logs. - Used for Pairing Tokens (TL-ORG-84920), IP addresses, and timestamps. - Eliminates character confusion between '0' and 'O', or '1' and 'l'.

Complete Type Hierarchy Scale

Scale Level	Size / Leading	Weight & Tracking	Role & Application Example
Display / Hero	32pt / 38pt	ExtraBold (-0.02em)	Landing page heroes, marketing covers: <i>'Clocking in from bed is over.'</i>
Section Head (H1)	20pt / 26pt	Bold (-0.01em)	Primary console screen titles: <i>'Workforce Presence Matrix'</i>
Subheading (H2)	14pt / 18pt	Bold (Normal)	Card container headers: <i>'Live Check-In Activity Feed'</i>
Card Title (H3)	11pt / 15pt	SemiBold (Normal)	Modal headers, widget summaries: <i>'Office Operating Hours'</i>
Body Regular	9pt / 13pt	Regular (Normal)	Primary paragraph text, explanatory guidelines, policy descriptions.
Caption & Badge	7.5pt / 10pt	Bold (+0.05em UPPER)	Status indicators: DISPATCH SENT, LIVE VERIFIED
Technical Data	8.5pt / 11pt	Monospace Medium	IP Subnets, pairing tokens: 192.168.1.1 · TL-ORG-84920

Typographic Formatting Rules

Line Length & Measure	Limit body paragraphs to 55–75 characters per line to preserve reading speed during operational administration.
Tabular Figure Alignment	All attendance counts, timestamps (e.g. 08:14:22), and salary hours must use monospace or tabular numbers.
Capitalization Hierarchy	Sentence case for UI buttons and alerts; Title Case for page headers; UPPERCASE strictly reserved for badges.

05 / DIGITAL UI & COMPONENT ECOSYSTEM

Product Interfaces & Design System Components

The TimeLogic product ecosystem spans three primary user tiers: executive command dashboards for HR and operations leads, dedicated hardware kiosk terminals for station entrances, and personal verification apps. Below are authentic interface captures and standard component rules.

HIGH OVERSTAYED BREAK

Lystia Akemune (ENROLLED)

Break duration exceeded the daily limit.

System: Break of 61 min exceeded the daily limit of 60 min. 18/09/2026, 14:01:40

Resolution: Reviewed after investigation

RESOLVED

3. FraudGuard™ Intelligence: Real-time anomaly engine flagging duplicate devices and geo-spoofing.

3D checkmark icon

4. End-to-End Cryptography: Ephemeral tokens and hardware cryptographic isolation for bulletproof records.

Core Design System Component Rules

Component	Styling Specification	Interaction & State Rules
Primary Action Button	Electric Blue (#2563EB), 12px rounded-xl, 14px font, bold weight, 44px height.	Hover shifts to #1D4ED8; active press scales down 0.98; disabled states set to 40% opacity.
Container Cards	Dark Navy (#0C1A42) or White (#FFFFFF), 16px radius, 1px border stroke.	Border uses rgba(255,255,255,0.12) on dark mode; #E2E8F0 on light mode.
Live Status Pills	Pill capsule shape (rounded-full), 8pt uppercase bold font, 2px pulsing dot.	Green dot for active presence; Amber dot for grace periods; Red dot for security triggers.

06 / HARDWARE & GOVERNANCE

Hardware Deployment, Environmental Standards & Governance

TimeLogic hardware stations represent the physical bridge between workforce personnel and our cloud intelligence platform. Proper hardware mounting, ambient lighting calibration, and brand co-branding ensure uninterrupted biometric throughput and legal compliance.

Physical Kiosk Station Deployment Standards

Parameter	Engineering Standard	Operational Rationale
Mounting Height	145 cm (± 5 cm) from finished floor level to camera lens center.	Universal ergonomic height accommodating seated and standing employees seamlessly.
Ambient Lighting	300 to 500 Lux indirect, diffuse overhead lighting.	Prevents harsh facial shadows and eliminates camera glare caused by direct sunlight.
Network Connection	Dedicated 5GHz Wi-Fi or Ethernet with static IP binding.	Guarantees low-latency cryptographic QR code rotation and sub-second face sync.
Hardware Enclosure	Tamper-proof acrylic or aluminum lockbox with concealed power.	Prevents unauthorized access to OS settings, USB ports, or physical power buttons.

Enterprise Co-Branding & Partner Presentation

Equal Optical Weight	When co-branding client portals or physical kiosk acrylic plates, the client's corporate emblem and the TimeLogic mark must share identical optical visual weight. Neither logo should overpower the other.
The 1px Dividing Stroke	A subtle vertical dividing rule line (1px width, rgba(148,163,184,0.4)) must separate the client logo on the left and the TimeLogic mark on the right, accompanied by the sub-text: 'Powered by TimeLogic Intelligence'.
